# 80 Dile

## Area and Circumference

$$A = \pi r^2 = 5656 \text{ yd}^2 \approx 1769.4 \text{ yd}^2$$

$$r^2 = 42.1 \text{ yd}$$

$$C = 2\pi r = 2 \cdot 3.14 \cdot 42.1 \text{ yd} = 264.5 \text{ yd}$$

## Items amount cost

Items	amount	cost
• Kook trees	6	\$ 1380
• Rain forest	20	\$ 900
• Rain forest	6	\$ 277,300
• Rain forest	264.5	\$ 18507
• Fence	1	\$ 225
• Shelter	1	\$ 740
• Waterfall	1	\$ 10580
• Ditch	264.5	\$ 10580

## TOTAL PRICE:

\$ 310,532

Brenner

# Snowy Owl Perch

## Area cover

$$A = \pi r^2 = 254,311 \text{ ft}^2$$

$$\pi = 3.14$$

$$r = 90 \text{ ft}$$

$$r = 8100 \text{ ft}$$

## Circumference

$$C = \pi d = 565 \text{ ft}$$

$$r = 90 \text{ ft}$$

$$\pi = 3.14$$

$$C = \pi d = 565 \text{ ft}$$

$$d = 180 \text{ ft}$$

$$\pi = 3.14$$

## Scale

$$1 \text{ in} = 10 \text{ ft}$$

$$1 \text{ in} = 100 \text{ ft}^2$$

Species Canis Lupus

Gray wolves used to be found all over Mexico, Africa, and Southern Asia. Now a days gray wolves are only in the United States, Canada Mexico (a small amount), and Eurasia. There was a decrease in wolves because of the habitat getting destroyed, environment wavering by humans, and other obstacles towards their growth. Although, the gray wolves are one of the most popular land animals. They are located in forests, tundras, prairies, barren landscapes, and many, many more. The dog disappeared because it is not a wolf.

### Using Mathematics: Area, Perimeter, drawing to scale

## Kingdom: Animalia

The members of the kingdom, Animalia are multicellular creatures that gain energy. The cells of animals lack rigid edges like plants. Animalia ranges from creatures with just a few cells to massive giants like a blue whale and giant squid. There are more than 9 million different species in Animalia all over the world.

## Phylum: Chordata

Members of the phylum, chordata possess a backbone. They have a full digestive system and are roughly symmetrical. All animals in chordata have a brain. They have a segmented body including their muscles. Members of Chordata contain an inner skeleton.

The starfish is not in Chordata because it does not have a backbone.

## Class: Aves

Aves, or birds all have wings and feathers. They have beaks and lack teeth. Aves have a strong muscular stomach and a powerful skeleton. Birds lay hard shelled eggs with a yoke in the center. All aves care for their young or find something to do it for them.

A rabbit is not a member of the class, Aves because it does not have feathers.

## Order: Strigiform

Strigiforms, also known as owls are known by their strong legs and noiseless flight. Owls have short beaks curving inward. They have large stationary eyes and mostly hunt by night. Owls have a sensitive hearing system for hunting small prey. Strigiforms don't build nests instead they use another bird's nest. Owls vary in size and live in many different places.

Bluejays do not have talons like owls do so they are not Strigiforms.

## Family: Strigidae

Strigidae is the larger family of owls. Their weights vary from 40 kg to 4 kg. These owls have large heads and somewhat lengthened eyes. During breeding season the father is the main protector of the nest. Strigidae have smoother sharper talons and much more circular heads than their cousins, Strigids.

The

# Bubo

## Genus: Bubo

# Scandi-

# acus

## Species: Bubo scandiacus

The Bubo scandiacus or snowy owl is an owl living in the Arctic Tundra. A snowy owl's diet is composed of small mammals, birds and occasional fish. The global population of the snowy owl is stable and there is little need to protect them. The Bubo scandiacus is the largest bird in the tundra.

The Great Horned Owl lacks the white and black markings of the snowy owl.

# Scientific Name: Canis Lupus

## Classification of the Gray Wolf

Report by: Samantha Klein

### Kingdom Animalia

### Phylum Chordata

### Class Mammalia

### Order Carnivora

### Family Canid.

### Genus Canis

### Species Canis Lupus

### Kingdom Animalia

All animals rely on others for their food. Most animals have a mate that they make babies with. Others lay eggs and their babies hatch from the eggs. An animal drinks, eats, and breathes.

### Phylum Chordata

During the time a chordate is growing they get a structure called a notochord. The notochord is as big in the body when it is full grown. The notochord is close to the gut of the animal. It makes the body stiff and supports the body when the animal has locomotion. Also, all the animals in Chordata have spines. The starfish disappeared because it does not have a spine.

### Class Mammalia

In the class Mammalia there are 26 orders that 5000 different species are placed in. Three characteristics that mammals share are 3 middle ear bones, hair, and sweat glands that produce milk (mammary glands). The sizes in the class Mammalia range from shrews and bats (around 3 grams) to a blue whale (about 160,000 kilograms). Many different mammals live in many different places. Many mammals live near lakes, streams, or the coast.

### Order Carnivora

Not all animals part of Carnivora are carnivores. In the order Carnivora there are thirteen families and 270 species. Animals of Carnivora live in many different habitats such as forests, deserts, mountains, grasslands, scrublands, tundra, and open ice. Many animals of Carnivora can be recognized by their upper premolar and lower molar.

### Family Canidae

In the family Canidae there are only 34 different species. They live on all continents aside from Antarctica. This is one of the oldest groups of carnivores. Animals from the Canidae rely on their noses and ears more than eyes. All Canidae have long muscles along with their deep-chested bodies.

### Genus Canis

The three subspecies in Canis are wolves, dogs, and dingoes. In Latin, the word Canis means "dog". Canine comes from caninus ("of the dog"), the term canine tooth also comes from this. Also, the canine family has canine teeth for killing prey. Coyotes, or jackals, are actually the same animal, but they are called something different in different places. In the Americas it is coyote and elsewhere it is jackal. The fox disappeared because it is not part of the genus Canis.

### Species Canis Lupus

Gray wolves used to be found all over Mexico, Africa, and Southern Asia. Now a days gray wolves are only in the United States, Canada, Mexico (a small amount), and Eurasia. There was a decrease in wolves because of the habitat getting destroyed, environment changing by humans, and other obstacles towards their growth. Although, the gray wolves are one of the most popular land animals. They are located in forests, tundra, prairies, barren landscapes, and many, many more. The dog disappeared because it is not a wolf.
